DETAILED ACTION

Claim Objections

1. Claims 8-11 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 8-11 have not been further treated on the merits.
2. The examiner also notes that, in general, the claims are written in a form that is generally narrative in nature as opposed to the more conventional form that is typically used for claims. While the examiner notes that no specific objections are being made, the applicant should carefully review such claims to insure they properly reflect applicant's invention.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding independent claim 1, the claim includes a limitation of a "light-receiving element connected to the bottom face of each scintillator cell of this multi-layer scintillator." This limitation is unclear. The examiner notes that it appears from the description and the drawings that the light-receiving element is connected to only the bottom face of each scintillator cell in the bottom layer of the stack (i.e., in a 2 x 2 x 4 arrangement, only the bottom 4 of the 16 cells would be connected to the light receiving element).

Allowable Subject Matter

Art Unit: 2884

5. Claims 1-7 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

6. The following is a statement of reasons for the indication of allowable subject matter:

Regarding independent claim 1, as best understood, while depth of interaction detectors comprising multi-layer scintillators obtained by coupling at least two scintillator cells on a plane and then stacking the planar coupled scintillators are generally known in the art (see for example Inodama *et al.* – “A depth of Interaction Detector for PET With GSO Crystals Doped With Different Amounts of Ce”), the prior art does not disclose detector arrangements wherein the detector includes means for making uniform (generally described in par. 0037 of present application, now US Pub. 2005/0087693) the quantity of light emitted from each scintillator cell and received by the by the light-receiving element.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
